

This hands-on endodontic workshop is aimed at the General Dentist who wants to improve his/her endodontic skills. Dr Motearefi is an expert in this field and welcomes this opportunity to share her knowledge, expertise, tips and tricks with participants.

This is a half-day workshop focussing on access preparation, locating canals and shaping the root canal system, specifically using the WaveOne single-file system. The workshop is divided into lectures, demonstration and hands-on clinical exercises. The objectives of the workshop are:

- diagnosis and case selection
- locating access canals
- shaping mild to moderately curved canals
- identifying possible complications
- tips and tricks for ultrasonic endo tool usage

Registrations close Friday, 10th March 2017

Endodontic tooth models which have prepared access cavities and which cut like natural teeth will be used for demonstrations and clinical exercises.

Dr Pantea Motearefi

BDS (Hons) UWA, DCD (Endo) UWA, MRACDS

After graduating from UWA with a Bachelor of Dental Science (Honours) degree in 2003, Pantea moved to New Zealand where she practiced hospital and private dentistry. This was followed by a move to Brisbane before returning to Perth for further training in Endodontics. In 2011 she graduated from University of Western Australia with a Doctorate of Clinical Dentistry in Endodontics.

Pantea is dedicated to continuing education and research. Her work has been published in a number of well recognised journals including International Journal of Endodontics and Australian Dental Journal. Pantea has also been involved in teaching undergraduates at UWA for a number of years. Dr Motearefi is registered with the Dental Board of Australia (AHPRA) as a Specialist dentist. She's also a member of the International Association of Dental Traumatology, Australian Society of Endodontics (ASE), Royal Australasian College of Dental Surgeons (RACDS), Australian and New Zealand Academy of Endodontics (ANZAE). Her special clinical interests are managing dental trauma, resorption, revascularisation and pain management.
